

(3E / Baze Technology Press release - September 12th 2012)

3E partners with Baze to deliver intelligent wind farm monitoring and operations software

Independent global renewable consultancy and software company, 3E, are teaming up with Baze Technology. BazeField Wind Farm Management system will now be incorporated into part of 3E's SynaptiQ Wind software portfolio.

SynaptiQ Wind is a multi-user, multi-technology software platform for wind portfolio management as well as reporting and business intelligence. It will now be powered by the same robust and scalable software foundation as Baze Technology's own BazeField® system. 3E has a 15 year track record in over 30 countries throughout Europe, Africa and Asia. The company's expertise in the energy industry and significant client portfolio makes this a complementary and exciting partnership for Baze Technology.

"We believe 3E and their SynaptiQ Wind platform will increase our access, competence and experience. Together we will deliver the best software for the wind power industry," says CEO Sigurd Juvik of Baze Technology.

"Applying the power and flexibility of the BazeField software platform to SynaptiQ's unique business intelligence for optimised wind farm management positions our software solutions at the forefront of the wind industry transition towards independent asset management services" added Geert Palmers, CEO of 3E.

Notes

3E is an independent global consultancy and software company, focused on improving performance and facilitating the development and grid integration of renewable energy. 3E has been developing the SynaptiQ wind portfolio management software platform since 2009, based on its 15 year track record in due diligence, resource assessments, data analysis business intelligence and project guidance for the wind industry. www.3E.eu | www.3Esynaptiq.com

Baze Technology is a software company, providing ground-breaking systems used in the renewable energy, offshore production and marine operation industries. BazeField® Wind is a turn-key, turbine independent, OMS system for running, multi-site wind farm operations. Based on nearly two decades of development of fact based operations management software (OMS) for the oil & gas and process industry, Baze Technology is revolutionising how wind power companies can operate all elements in a wind farm value chain. www.bazetechnology.com
